

OTHER FACTORY NEWS

The Evolution version of the S (the ES) is now due to appear "later this summer" and will be powered by a 240 bhp 3.8 litre e.f.i Australian Holden V6 engine. The price will be £20,000.00 and a deposit of £1,500 is required.

TVR are also evaluating another Australian Holden powerplant. This is a 5.0 litre V8 also with electronic fuel injection. Power output depends on state of tune and is available from 240bhp in an emission controlled version, up to a full race version with 560bhp. Emission control is the primary reason for looking at the engine. With ever tightening emission legislation it is becoming more difficult to provide adequate power output while meeting all environmental demands. Holden are also very interested in forming a liaison with a small capacity European manufacturer and are undertaking extensive research into the project aided by TVR.
